Wow Admin Panel

Version 2.0.0

Probably the best WoW Private Servers trainer out there …

Wow Admin Panel will notify you on possible detectable cheats on your specific realm, and how to avoid detection.

When logged in, you will see your realm name at the top right corner of the trainer.
If you see an icon near it, make sure to not ignore that icon.

The hazard icon means that there is an important information you need to know regarding to your specific realm. Make sure you click it, read the notification displayed to you and act accordingly.
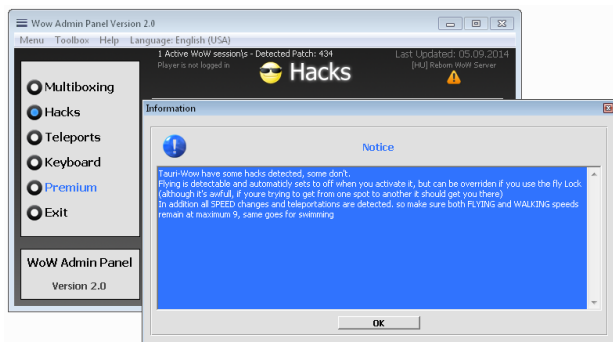

The shield icon means that the specific realm you're currently on, was tested and found safe to activate all cheats on. You may hack freely.
Make sure however that updates may take place and you always have to make sure that the 'Last Update:' took place in less than a week or so from your current date. Or this prediction may not be as accurate.
In any-case remember that hacking in the game is a risk you take, and at your own risk.
it can always be detected and if server owner really wants to.

MultiBoxing

 Global Keys

Wow Admin Panel allows you to broadcast keyboard key-presses to all open WoW Windows. To enable that feature, simply activate Global Keys by clicking the Multiboxing menu and then selecting 'Global Keys'

Once activated, your keyboard will implement all keys pressed by you to all wow sessions, regardless to what window you are focusing on.
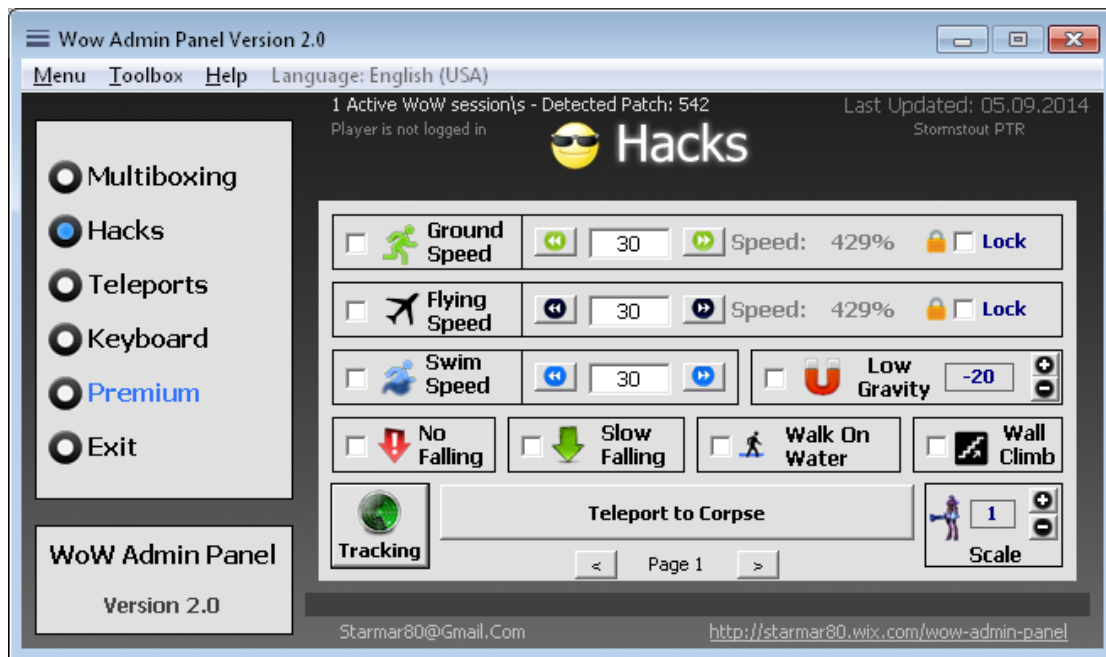

There are some keys however that will not be broadcast, to keep game-play smooth and logical:

- W, S, D, A Keys
- E,Q Keys
- Tab Key
- Numlock Key
- Enter Key
- Up, Down, Left, Right, (Arrows) Keys
- Forward-Slash Key

Notices that non premium members can use this feature to broadcast keys to up to 3 windows, premium members are able to broadcast to all open wow sessions without limits, except pc hardware limitations.

Also, activating this feature will require resources from your PC, so if you're not using it, to better performance, please set it to disabled.

Hacks

Ground Speed

Change your walking \ running \ ground-mount speed. Default is 30.

Flying Speed

Enable \ Disable Flying and its speed. Default is 30.

Swim Speed

Change swimming speed. Default is 30.

No Falling

When activated, you can't fall, and keep your Z axis straight. Also disables the jumping.

Slow Falling

Allows you to fall softly to the ground, imitating levitation, keeping mind though, you will still take full damage when you hit the ground, this is meant to allow you to reach places unreachable.

Walk on Water

Enable \ Disable water walking (instead of swimming)

Wall Climb

Enable \ Disable the ability to 'walk over' any mountain \ tree \ object regardless to its steepness

Scale
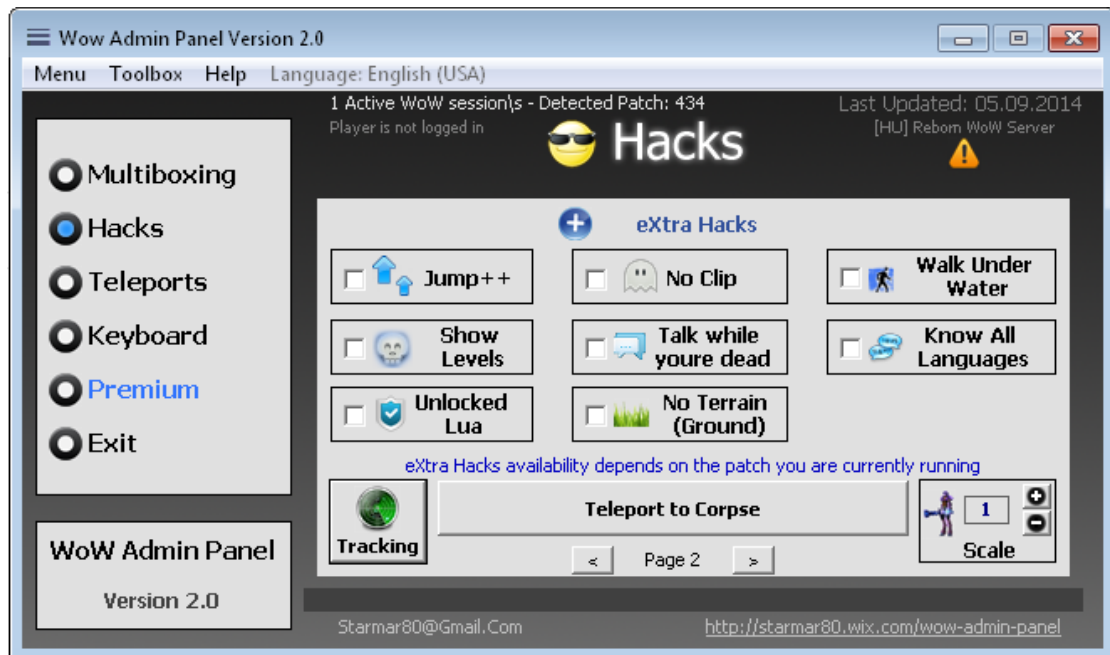

Increase and decrease character size. – Only seen by you.

Tracking

Opens radar tracking menu

Teleport to Corpse

Click when you're dead to go straight to your corpse's location.

eXtra Hacks

Each patch has different eXtra hacks available to it. This section will get updated in the near future, some like patch 5.4.8, don't have any extra hack available to it.

Jump ++
Enable \ Disable infinite jumps
Show Levels
Show a creature or a player's real level, ignoring the difference in levels between you and your target.
Unlock Lua
Unlocks protected lua commands, great for scripting.
No Clip
Allows you to walk through trees, building, objects, etc
Talk while you're dead
Guess…
No Terrain
Ignores terrain – make sure you either fly or enable No Falling, or you'll end up underground
Walk under Water
Ignores water, allow you to simply walk under water instead of swimming in it
**Know all Languages**
Allow you to understand every race's language.

Tracking

Allow you to have your in-game radar display any type of creature\item\quest-item\object which is possible to be tracked by the game mechanics.

Simply click Tracking and tag the creatures and objects you would like to track.

Teleports

Teleport menu allows you to get to places on your map – instantly.

Make sure you are located on the continent\map of the location you would like to go to.

If your character is now in Stormwind (Eastern Kingdoms) it cannot teleport to Outland or Pandaria, simply because they are not in the same continent. Same goes for dungeons.

Features:

Location

The blue down arrow button (⬇) above the coords will copy your character's current position to the editable coords section, from which you can change to what ever X-Y-Z values you would like to have your character positioned at, and click 🔄 Go .

If you confused or got somewhere you didn't want to, click ↩ Previous to go back to where you came from.

Teleport List

To teleport to a location simply click its name on the list to the bottom left, and click GO

- **Load** – allows you to add a teleport list file to your list.
- **Edit** – allows you to edit your teleport list in notepad
- **History** – shows you all the teleports you did since wow admin panel was executed
- **Add New** – allows you to add your character's current position to the list and save it.

XYZ Moving

Enable disable the ability to move using the Numpad keys. On the X Y Z Axis.
You may click the settings icon (🔧) to change its behavior

Xyz Moving Settings

```
┌─XYZ Moving Settings───────────┐
│                               │
│  Range per move    [   5    ] │
│  ☐ Server Sided               │
│  ☐ No-Fall after each move    │
│  ┌─────────────────────────┐  │
│  │        < Back           │  │
│  └─────────────────────────┘  │
└───────────────────────────────┘
```

- **Range per Move**
  Determines how far your each XYZ key press moves your character.
- **Server Sided**
  When Server-Sided is enabled, your character will have its position 'refreshed' by the server after every XYZ move. This means that it will have its location sent to the server for every single move you do, this is to avoid having anti-cheats that are based on location-calculations detect your XYZ moves on short distances.
- **No-Fall after each move**
  Enable this to activate No-Fall after every move, to avoid getting your character in endless falling stuck underground in case you XYZ your character to a bad position.

Extended Teleport list

Allow you to search a location in your teleport list by typing part of its name, and pressing the Enter key. To go to a location on the list, simply click it once, and click **GO**.
You may also bind that location to a keyboard key by clicking **Bind to Key.**

Stop Falling
No matter where you are, falling, walking, flying, swimming, this will have your character stop moving.
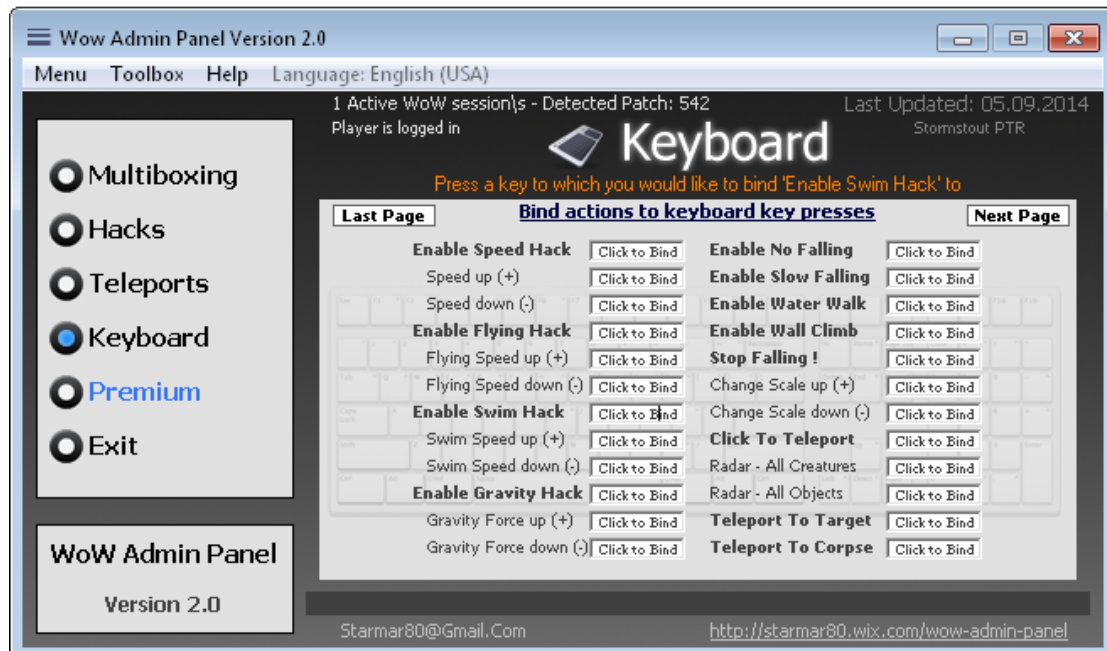

Previous
Teleports back to the last location you came from

Server Sided
Notifies the server on your character's location right after the teleport.
If this isn't checked, the actual character teleport will only be visible to the server, once you your character moves\turns.

Keyboard

Keyboard menu features 48 different actions that can be customized and bound to keyboard keys as you wish.

Much of it is pretty much self explanatory.
Simply click the white **'Click to Bind'** Textbox, followed by a keyboard key of your choice.
This will bind that action to that key. To unbind a key, click it again and press **ESC**.

You may switch between available actions using [Last Page] and [Next Page]
If you bound an action on one page, you can move on to the next page, minimize the window, move to another menu, your keyboard bind will stay as you left it, regardless to the menu you are currently watching until you close the trainer or unbind it.

Menus

Features

Tag between client feature menus.

Set Patch

Allow you to manually set a patch that the client will relate to in case the Automatic detection system did not find it.
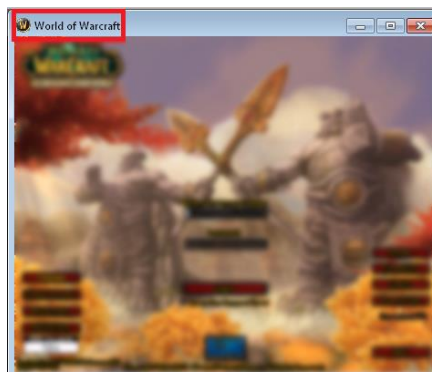

Save Settings

Save your current settings
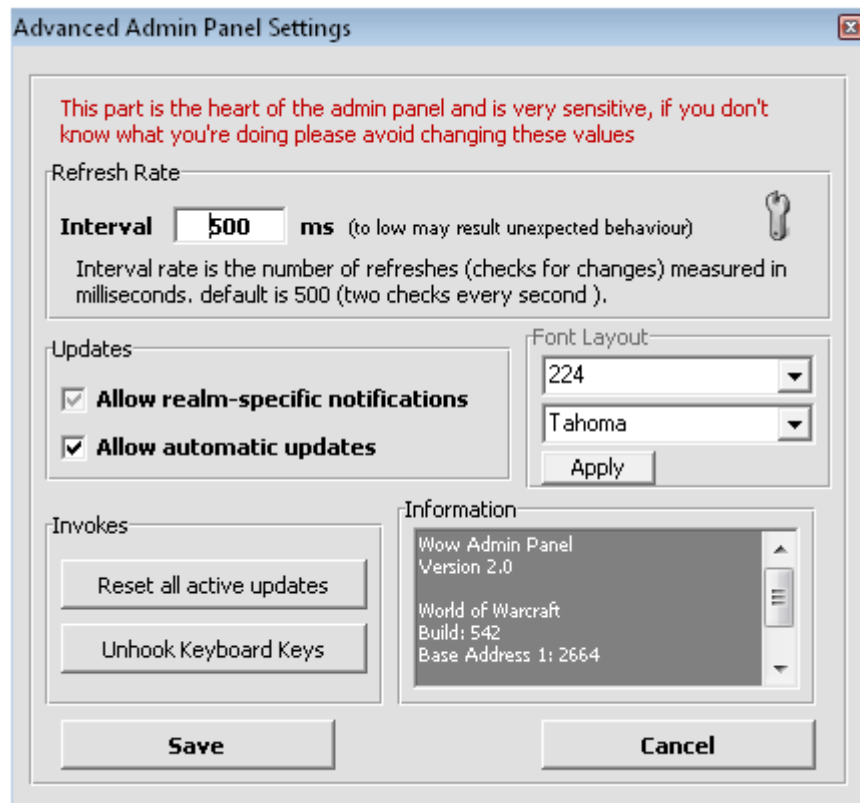

Reset Settings

Reset settings to default

Advanced

- Memory – If you don't know what this part is for, no need to touch this.
- Change this title – Click it to change the title of the client . this was implemented to avoid having old-time anti-cheats detect a hack by its name.
- Change WoW title – If your in game world of game window is not named exactly like it should the client will not work. It will simply not detect your game. So to solve that, simply use this feature, type in the exact name of your current wow window (and it will be changed accordingly)

- Settings – This menu will allow you to change settings of backend work of the client.

Interval

Interval is the refresh rate for the client.

It determines everything related to respond time of features.

For example, the XYZ Moving is based upon this value, even if you hold the numpad key, it will only move your character at as fast as the interval allows it to.

Allow realm-specific …

Irrelevant

Allow automatic updates

If you would like to disable automatic updates please uncheck this.

Be aware however that all updates will no longer be downloaded automatically from the server, all internet connection from the admin panel to the outside world will be blocked, and if something is required for you to know, like a notification, change about your realm, or a new cheat that was implemented, a fix that was released, anything, will be blocked and unavailable to you.

If you choose this option, please, be wise, and make sure to manually download the update file located here and place it on the same folder with the client, where your wap.exe is.

Reset all active updates

Stops all active updates and downloads immediately

Unhook keyboard keys

Unhook all keyboard key binds, use this if something goes wrong with your keyboard keys while the admin panel is active.

Font Layout

Allow you to change Font and charset for the admin panel to support foreign languages (ASCII).

This is disabled by default, but if you wish to enable this, just type "SHOW" on the interval textbox, press enter, and then change to what you wish and click Apply.

This part however is very advanced, and if you don't know what you're doing, please avoids doing so.

<u>PREMIUM</u>

There are many false and wrong cheats for WoW out there.
Most of them are viruses, key loggers, bad coded software which don't even work, some of them even promise to do things which aren't even possible, like changing your gold, or your character's stats.

The Wow Admin Panel Project is meant to give every person out there the ability to use cheats, without needing to search days for a valid file, scan it by 50 different anti viruses, to eventually find out it either isn't even working or worse.

Premium memberships enable the project existence.
Without it, there is no way it can be done stay valid and up to date.

Your support is needed.
If you like this project, and would like to support it, please consider **buying premium** for only 7$ using Paypal.

Doing that will not only unlock new features, and remove time limit usage., It will also grant you access to future updates, and releases through your mail prior to public releases.

Your contribution is highly appreciated, and even if you decide not to go premium, I personally thank you for using Wow Admin Panel. And spreading the word:

There is one trainer that actually works, enhances, and delivers what it promises.

Wow Admin Panel
